WorldCupHistory

By: Jose Fuentes

Application

- Visual way to look at stats across different teams and players (some graphs)
- Able to compare different teams across each tournament (also players)
- Can make predictions on which team might win (or draw) (hoping to use AI/ML)

Audience

Why do it?

- Big fan
- Always wanted to make some kind of website (good skills to have)
- What to work with data in the future

API-FOOTBALL (3.9.2)

support: https://dashboard.api-football.com | URL: https://www.api-football.com

Introduction

Welcome to Api-Football! You can use our API to access all API endpoints, which can get information about Football Leagues & Cups.

We have language bindings in C, C#, cURL, Dart, Go, Java, Javascript, NodeJs, Objective-c, OCaml, Php, PowerShell, Python, Ruby, Shell and Swift! You can view code examples in the dark area to the right, and you can switch the programming language of the examples with the tabs in the top right.

We have a **Public Roadmap** on Github, which will allow you to follow all the upcoming developments but also the possibility for everyone to suggest new features.

To propose a new feature the procedure is described here.
