<u>Week 17 - Written Status Report For WondoBot #5 (05/01/2024)</u>

Will cover weeks 16-17

Accomplished:
- Completed all the necessary commands, /predict, /predict-top, /predict-last, /predict-me, /players, /help, /predict-current
- Finished the interval/updating the database
- Able to host bot on a server

Scheduled Tasks to be done:
- Some future ideas that we couldn't do in the scope of the class
    - ML/AI prediction model - have the bot not just be a place for users to predict and see scores and matches, but have it also participate
    - Have a standings command - just to see the table of the other teams relative to where the San Jose Earthquakes are
    - Have a news commands - have a command that periodically checks the news for the team
    - Head to head command - command that grabs the head to head record of the current team that the earthquakes are facing

Noteworthy Risks, concerns, or problems:
- Only concern is if the host/server where the bot is being on currently just shuts/turns off for any reason, at that point its out of our hands and need to wait for the host/server to be back online
